Additional Info

MINI PROJECT: DISEASE DETECTION

The existing system the farmers are using for the detection of diseases in the plants is that- they could be identified through the naked eye and there knowledge about plant disease. For doing so, on large number of plants is time consuming, difficult and accuracy is not good. Consulting experts is of great cost. In such kind of conditions to improve the accuracy rate and make it more beneficial, suggested techniques are implemented where devices are used for the automatic detection of the diseases that makes the process cheaper and easier. Image recognition is a technology that enables us to identify objects,

people, entities, and several other variables in images. In today's era with increase in use of technology,
